

# MedInsight® Payer Solution

With pre-built, payer-focused content, the new MedInsight Payer Solution packages the functionality and analytics you need to get the most out of your data from the moment you first log in.

Tell compelling data stories with our customizable dashboards and advanced graphing capabilities. Create complex queries using our powerful, proprietary tools, like Query Express® and the Cube Browser, to produce answers in seconds.

Couple these features with our industry-leading data quality processes and refresh times, and you have end-to-end, comprehensive data analysis in days, not weeks.

## **CUSTOM-DESIGNED FOR PAYER ORGANIZATIONS**

Leveraging over twenty years of experience working with payer organizations, we developed our MedInsight Payer Solution specifically to tackle challenges that businesses like yours face on a daily basis:

- Data processing, collection, aggregation, quality
- Performance benchmarking
- Cost and utilization analysis
- Care management analysis
- Employer group reporting
- Risk management/optimization
- Population health
- Value-based care

## **NOBODY DOES DATA BETTER THAN WE DO**

The MedInsight Payer Solution is designed to accept a variety of data sources and formats. It leverages the MedInsight Data Confidence Model and Data Warehouse, the industry's leading methodology to ensure the utmost data confidence. This includes:

- 100+ automated audits
- 60+ stringent data tests
- Quick data refreshes that average three days
- Milliman peer review, a supplemental, manual review of your data by a trained Milliman data professional
- Custom-defined fields and dimensions
- Ability to store up to 600 data elements

This rigorous process ensures that the data going in can be relied upon to generate accurate results. Our analytics engine can integrate multiple complex databases while flagging inconsistencies and anomalies up front. The result is an analytic platform that truly ties through all the way to your bottom line.

## **BENCHMARKING TO SUPPORT PERFORMANCE ASSESSMENT**

Our Payer Solution leverages Milliman-engineered benchmarks tailored to the specific population being analyzed. These benchmarks are based on factors such as age, gender, geography, benefit design, and health risk adjustment.

We trend the benchmarks in order to be current and reflective of medical inflation. With MedInsight benchmarks, you can choose to compare whole populations broadly, or drill down to fine detail. With MedInsight's Payer Solution, you have complete control and full visibility into your populations.

## COMPREHENSIVE COST AND UTILIZATION ANALYSIS

We've integrated some of Milliman's most powerful analytic engines, like the Heath Cost Guidelines Grouper (HCG Grouper), into the MedInsight Payer Solution. The HCG Grouper is used to create population cost models, to define claims service categories and categorize specific utilization counts. You can drill down by plan, line of business, region, clinical population, and any defined population within the database. This methodology can help your organization more efficiently track utilization and analyze the claim cost dollar.

Customizable dashboards allow users to create stunning visuals to help tell stories and gain insights from data, while seamlessly flowing from one app to the next. We integrated one of the premier open source libraries for advanced graphing, ensuring that our features are always up to date.

## DETAILED, COMPREHENSIVE SUPPORT

In addition to our #1 ranked customer service team, per the KLAS study of 2019, you can also take advantage of MedInsight Learning. This online, integrated module is your one-stop-shop for training videos, documentation, and everything you need to know about using the Solution. This knowledge base is updated with each new release so your organization can stay current with the latest technology.

## POWERFUL ANALYTIC TOOLS

Our analytic tools are easier to use and more powerful than ever before. With the Cube Browser, you can produce results from large sets of aggregate or summary data in seconds. Query Express allows you to drill down further into detailed, claim line-level data for queries on specific populations or claims experiences. And Query Express can comb through hundreds of millions of claim lines in seconds.
